

Repurposing Research to Improve Clinical Patient Outcomes in Meniere's Disease

Description / Background

This Request for Proposals is seeking repurposed treatments to address Ménière's Disease (MD), with up to \$100,000 available in total funding. We are interested in generic or proprietary drugs, devices, nutraceuticals or diagnostics that could be repurposed to create "new" treatments to 1) reduce the symptoms, progression or incidence for MD; 2) restore function lost to MD; or 3) to reduce or eliminate severe side effects of currently used therapies for MD, thereby improving patient outcomes and quality of life.

Repurposed therapies can be used alone or in combination with other therapies. **Therapies must already be FDA approved or otherwise readily available for human use.**

Additional Proposal submission instructions can be downloaded at this link:
<https://goo.gl/f5gJhf>

Our strongest preference is for proof of concept repurposing clinical research trials supported by strong scientific evidence or clinical observations. We may also consider later stage clinical trials that require additional funding, if our additional funding will help speed the patient impact of the clinical trial.

If you have a repurposing idea in Meniere's disease that isn't an exact fit for this RFP, or if you have eligibility questions due to budget or other aspects, please contact Clare Thibodeaux, PhD at clare@cureswithinreach.org to discuss fit and/or submission options.

No preclinical research projects, including animal studies, will be accepted for this RFP. However, Cures Within Reach has up to \$25,000 in funding available for preclinical repurposing research in MD in a separate RFP. PIs are welcome to apply to both RFPs, for either independent or combination projects. To see the details of the preclinical RFP, click this link: <https://app.cureaccelerator.org/rfp/view/88>

Cures Within Reach is circulating this RFP because our funders and scientists have determined that MD is currently partially or fully unsolved. An unsolved disease is one in which one or more of the following are true:

- There is currently no effective treatment
- The current treatment is only effective for a portion of the patient population
- There is a treatment that is effective, but many patients develop resistance to the therapy
- There is a treatment that is effective for the entire patient population, but the treatment is very expensive, and therefore some patients cannot get access to the treatment
- There is a treatment that is effective for the entire patient population with significant side

effects, and for some patients the negative side effects outweigh the benefits of the treatment

Even if this is not your area of expertise, you may be able to help! Many of our successes in repurposing have come from researchers and clinicians who had ideas that could impact a disease that was outside of their normal therapeutic or scientific area. We are happy to receive proposals that would repurpose therapies from outside MD that could have an impact on MD.

For example, a device that worked in eradicating liver cysts was repurposed by a team of researchers to create a repurposed treatment for prostate cancer. Gastroenterology and radiology researchers and clinicians worked with the oncology researchers and clinicians to assist in proposing and carrying out this repurposing research. So even if MD isn't your area of expertise, you may still be able to help to make an impact on patients with MD. **Please submit your repurposing ideas, find colleagues in this specialty to work with and circulate this RFP to others who might be able to submit repurposing research that could provide a solution for this disease.**

Important Funding Information:

Funding Definitions:

- Project Funding = total research budget (no set maximum)
- Remaining Project Funding = funding needed to reach the total research budget (no set maximum)
- Existing Project Funding = Project Funding minus Remaining Project Funding (no set maximum)
- Requested Project Funding = funding requested through this RFP (maximum = \$100,000, including the 20% institutional match)
- Budget Breakdown = breakdown of the Requested Project Funding (maximum total = \$100,000, including 20% institutional match)
- Estimated Overall Project Costs = Requested Project Funding (see above)

Cures Within Reach will accept REQUESTED PROJECT FUNDING amounts that are within the minimum and maximum amounts indicated. We do not set an upper limit to the PROJECT FUNDING, or the EXISTING PROJECT FUNDING, but REQUESTED PROJECT FUNDING amounts to Cures Within Reach are limited to the maximum amount specified in the Funding Information section below. Proposals may be submitted for which the PROJECT FUNDING is within the Cures Within Reach maximum, and for projects that already have EXISTING PROJECT FUNDING from another source and require REMAINING PROJECT FUNDING, when this additional funding from Cures Within Reach will help speed patient impact.

Cures Within Reach REQUESTED PROJECT FUNDING must be sole, late or final funding for the project. REQUESTED PROJECT FUNDING from Cures Within Reach cannot be the first funding raised for a project, unless the REQUESTED PROJECT FUNDING, including the 20% match from the institution, organization or company proposing the research, equals the PROJECT FUNDING.

Cures Within Reach will provide no more than 80% of the REQUESTED PROJECT FUNDING, and the institution, organization or company proposing the research will match at least 20% of the REQUESTED PROJECT FUNDING. The REQUESTED PROJECT FUNDING is equal to the ESTIMATED OVERALL PROJECT COSTS in the BUDGET BREAKDOWN section of the proposal submission, and includes the institutional 20% match. All funding amounts and requests are in US dollars.

Here are several examples of funding requests and disbursements to help investigators and institutions understand the funding opportunity.

Example A

The minimum funding request to CWR is \$25,000 and the maximum is \$100,000. The PI enters \$80,000 for REQUESTED PROJECT FUNDING and for ESTIMATED OVERALL PROJECT COSTS in the BUDGET BREAKDOWN, which equals the PROJECT FUNDING. CWR approves this project, and will provide \$64,000 (80% of the REQUESTED PROJECT FUNDING) and the investigator/institution will match the remaining \$16,000 of the REQUESTED PROJECT FUNDING.

Example B

The minimum funding request to CWR is \$25,000 and the maximum is \$100,000. The PI enters \$100,000 for REQUESTED PROJECT FUNDING and for ESTIMATED OVERALL PROJECT COSTS in the BUDGET BREAKDOWN, which equals the PROJECT FUNDING. CWR approves this project, and will provide \$80,000 (80% of the REQUESTED PROJECT FUNDING) and the investigator/institution will match the remaining \$20,000 of the REQUESTED PROJECT FUNDING.

Example C

The minimum funding request to CWR is \$25,000 and the maximum is \$100,000. The PI enters \$100,000 for REQUESTED PROJECT FUNDING and for ESTIMATED OVERALL PROJECT COSTS in the BUDGET BREAKDOWN, which will cover one-third of the \$300,000 entered for PROJECT FUNDING. The other \$200,000 is entered for EXISTING PROJECT FUNDING, and has already been secured by the investigator and institution. CWR approves this project, and will provide \$80,000 (80% of the REQUESTED PROJECT FUNDING) and the investigator/institution will match the remaining \$20,000 of the REQUESTED PROJECT FUNDING and provide the \$200,000 of the EXISTING PROJECT FUNDING.

REQUESTED PROJECT FUNDING cannot be used for any indirect costs, although up to 10% of the REQUESTED PROJECT FUNDING can be used to cover direct project administrative costs.

Timeline

Do you have a preference for where the research should take place?

This research can take place anywhere in the world where good scientific research and clinical practices can be assured. This RFP is open to accredited academic and governmental research institutions, large group medical practices significantly involved with medical research, biotechs, pharmaceutical companies and medical device companies

Do you have a preference for where you would like to see patient impact?

Our main focus is on repurposing research in Ménière's Disease. We are hopeful that any discovery would be useful anywhere in the world where the repurposed therapy is available.

Restrictions

There are no other restrictions other than those described above.

Other Information for Researchers

Cures Within Reach and our funders primarily fund proof of concept clinical trials that can determine whether a repurposed therapy can have a direct and positive impact on patients. Sometimes the clinical trials in our portfolio are open label studies with clinical endpoints that compare to the natural history of the disease. Other clinical trials are randomized, blinded and controlled studies. We are open to all clinical trial designs that have the opportunity to create a robust and well-defined outcome that will show reproducible clinical impact.

Funding Available

Minimum \$25,000

Maximum \$100,000

Funding Description

See full Funding information in the Research Description section above. Cures Within Reach will

accept REQUESTED PROJECT FUNDING amounts that are within the minimum and maximum amounts indicated. Cures Within Reach REQUESTED PROJECT FUNDING must be sole, late or final funding for the project, as indicated in the Research Description. REQUESTED PROJECT FUNDING cannot be used for any indirect costs, although up to 10% of the REQUESTED PROJECT FUNDING can be used to cover direct project administrative costs.

Open to co-funding

Co-Funding Description

We will accept projects that already have funding from another source and require additional funding, when this additional funding from Cures Within Reach will help improve the chances of success of the project, and therefore increase the chance of patient impact. Cures Within Reach REQUESTED PROJECT FUNDING must be sole, late or final funding for the project, as indicated in the Research Description. We are open to working with other funders who share our desire to find solutions for Meniere's Disease patients and are interested in these near-term repurposing opportunities.
